

# NOTIFICATION OF CHANGE

## New package content for article no. 6300

### More content for cleo® saphir protective sleeves (sterile version / elastic band)

Berner International GmbH is committed to the environment and would like to make optimum use of packaging for this purpose. As a result of this sustainability aspect, we will from now on offer the sterile version of cleo® saphir protective sleeves with elastic band and article number 6300 in a packaging size per sales unit of 40 pairs. Previously, 30 pairs were usual. The carton size of the sales unit has been retained. The price per pair also remains unchanged.

### Product feature of the cleo® saphir protective sleeves

The cleo® saphir protective arm sleeve from Berner is certified as complex personal protective equipment of category III, type PB [4]-B and offers very good chemical protection. The liquid-impermeable coating in accordance with DIN EN 14605 and the triple ultrasonically welded seams ensure that your arms are always safely protected with the cleo® saphir protective sleeve. The protective sleeve and the welded seam are also tested with the critical test substance Carmustin, for guaranteed maximum protection for at least 8 hours. It offers the highest resistance to biological agents and CMR drugs. The conical cut and the well-fitting elastic band ensure high wearing comfort.

Yours sincerely from Berner International

Dr. Ralf Wörl
