cleo® saphir protective arm sleeves, slim version

Dear Sir or Madam,

At the request of some of our customers, we start to offer cleo® saphir protective arm sleeves in two different sizes. Therefore we introduce the new cleo® saphir protective arm sleeves in a slim version or size S/M, with knitted cuff, sterile and non-sterile. The advantage of the new version is the slim cut, which provides a better fit for slender arms.

The cleo® saphir protective arm sleeve in size S/M offers also maximum protection and wearing comfort for the field of application in handling CMR drugs (e.g. cytostatics, virustatics) and biological agents (e.g. bacteria and viruses) as complex PPE of category III and as partial body protection of type PB [4]-B following DIN EN 14605 in the field of chemical protective clothing and infection protective clothing.

The liquid-impermeable coating of the material provides a high barrier function against bacteria and viruses, and thus protection against infectious agents in the highest performance classes according to EN 14126. The material consists of spunbonded polypropylene nonwoven with the liquid-repellent coating of polyethylene and is latex-free. In terms of permeation protection according to DIN EN 16523-1, our cleo® saphir protective clothing meets the highest performance classes for all 7 tested cytostatics and other chemicals, with a breakthrough time of > 480 minutes.

Overview of the new models

Description	cleo® saphir protective arm sleeves non-sterile, slim	cleo® saphir protective arm sleeves sterile, slim
Item No.	6010	6011
Colour and size	Blue; S/M	
Application range	Non-sterile areas	Clean rooms: laboratories, hospital, pharmacy, medical practice
Durability	5 years	
Content	50 pairs per sales unit	40 pairs per sales unit
Availability	immediately
